S71285
mayb-related protein, 33.2K - Arabidopsis thaliana
myb-related protein, 33.2K - Arabidopsis thaliana
c;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 28-Oct-1996 #sequence_revision 27-Feb-1997 #text_change 31-Dec-2004
C;Accession: S71285
Sykirkk, V.; Baumlein, H.
Submitted to the EMBL Data Library, September 1995
A;Description: Characterization of two cDNAs encoding MYB-related proteins in Arabidopsi
A;Reference number: S71285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Molecule type: mRNA

MEDLINE=90298616; PubMed=2161360;

Shinomura Y., Eng J., Rattan S.C., Yalow R.S.;

Shinomura Y. Eng J., Rattan S.C., Ittle' and 'big' gastrins.";

Comp. Biochem. Physiol. 968:239-242(1990).

-!-FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach
                                                                                                bromus

SIMILARITY: Belongs to the gastrin/cholecystokinin family.

Wed Jan

```
-1- SUBCEILULAR LOCATION: Secreted.
-1- PTM: Two different processing pathways probably exist in antral G-calls. In the dominant pathway progastrin is cleaved at three sites resulting in two major bloactive gastrins, gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be processed only at the most C-terminal dibasic site resulting in the synthesis of gastrin-71.
                                                                                                                                                                                                                                                                                                                                                         activity
                                                                                                                   9

-I- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine. Purification and structural determination of urinary NH2-terminal big MEDLINE-20508341; PubMed=11052886; Palnaes Hansen C., Stadil F., Rehfeld J.F.; "Metabolism and acid secretory effect of sulfated and nonsulfated TISSUE-Antral mucosa; MEDLINE=9433379; PubMed=8055952; MEDILINE=9433379; PubMed=8055952; Rehfeld J.F., Johnsen A.H.; Johnson T.H.; The largest "Identification gastrin component I as gastrin-71. -I- FUNCTION: Gastrin stimulates the stomach mucosa to produce and
-I- FUNCTION: Gastrin stimulates the pancreas to secrete its
secrete hydrochloric acid and the pancreas to secrete its
digestive enzymes. It also stimulates smooth muscle contraction
and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Phenylalanine amide (G-93 provides amide

--- FUNCTION: Gastrin stimulates the stomach mucosa to produce and
secrete hydrochloric acid and the pancreas to secrete its
digestive enzymes. It also stimulates smooth muscle contraction
and increases blood circulation and water secretion in the stomach

Isolation, structure and synthesis of ovine and bovine gastrins.";

Nature 219:614-615(1968)

-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the panoreas to secrete its secrete hydrochloric acid and the panoreas smooth muscle contraction digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Phenylalanine amide (G-93 provides amide

Eur. J. Biochem. 255:432-438 (1998).

-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pyrrolidone carboxylic acid (Potential).
Pyrrolidone carboxylic acid (Potential).
